DETAILED ACTION

Priority

Receipt is acknowledged of the claim for benefit of Title 35, United States Code, Section 120 of the United States provisional application 60/506,176.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 12/16/2003 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

Claims 1-12 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: Though the prior art discloses almost all the limitations of claims 1, 8, and 12 (namely, 4-port circulators with polarization beam splitters, polarization rotators, polarization beam directing means, non-reciprocal polarization rotating means, and polarization beam combiners), the prior art of record fails to teach or suggest the aforementioned combination further comprising an input/output port for outputting a second sub-beam of an optical signal with a first polarization, and for inputting a second sub-beam of a modified optical signal with the first polarization whereby light entering the input/output ports with the second polarization will be directed away from the input and output ports.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Li (US Patent Application Publication 2002/0186914) discloses a four-port optical circulator including a polarization beam splitter, polarization rotators, polarization beam directing means, non-reciprocal polarization rotating means, and polarization beam combiners, but fails to teach the further features as specified supra. Doerr (US Patent No. 6,304,380) and Tai et al. (US Patent Application No. 2001/0053022) provide similar circulators disclosing some most of these known features but again fail to teach or suggest the entire claimed combination.
